The 2015 Garlic School will have a broad focus on disease, insect and weed pests that growers are already dealing with or that may show up in New York from other parts of the country. Cornell pathologists and growers will discuss the latest research on Aster Yellows, a disease which has devastated the garlic industry in the Midwest, and the soil-borne diseases such as Fusarium. The latest fertility and weed control research will also be presented.

Meeting Agenda

9:30 AM  Registration and Refreshments
10:00 AM  Disease and Insect Roundup: What We Know and What We Don’t! – Crystal Stewart, CCE Eastern NY Commercial Horticulture Program, Christy Hoepting, CCE Cornell Vegetable Program and Sarah Pethybridge, Department of Plant Pathology, Cornell University
