Berry Pruning Workshops

Proper Berry Pruning is one part of an effective Spotted Wing Drosophila management program. Proper pruning will also encourage long lived, productive plants. Join us for a hands-on demonstration of blueberry and bramble pruning.

These workshops are directed at the commercial grower. Properly blueberry pruning* for insect and disease management will be discussed. We will also talk about bramble pruning – depending upon the location – to include floricane and primocane raspberries and blackberries. An emphasis on SWD management will be part of the workshop. There will be time for questions and discussion.

* This location does not have blueberries.
+ These locations have High Tunnel berry production.

Please call to let us know you are coming! This helps us plan – and also allows us to cancel the class in the event of foul weather.

Call the person listed under the location and date you are interested in attending. **When leaving a message include your name and phone number.**
