Amount enclosed at \$10 per person: _____

Vegetable Grafting Workshop and More!

March 14, 2013, CCE Allegany 5435A County Rd.48, Belmont, NY 14813

In this workshop growers will learn about the latest Cornell Vegetable Program on-farm research projects. The use of winter grains to control weeds in summer vegetables was researched in 2012. Can this work as an alternative to herbicides? What is the effect on tomatoes or onions? Grafting is another cutting edge technology gaining in popularity. The advantages and techniques of grafting will be presented. Participants will graft their own tomatoes and take them home to make comparison with non-grafted plants. To make decisions on these inputs growers must understand the economics that drive profitability. HarvestNY is a new CCE initiative to connect growers with consumers. Cheryl Thayer will give a program update.

Cost \$10 per person

9:30 Welcome and Introductions-*Lynn Bliven, CCE All/Cat*

9:40 Harvest New York in Western New York-*Cheryl Thayer, HNY*

- Mission of Harvest New York
- Update on WNY projects and opportunities for local partnerships
